Subject: UOttawa Capstone Prince of Wales Bridge Rehabilitation Project

Dear Mr. Remisz,

It is with great pleasure that our team offers an update about our 4th year project at the University of Ottawa, more precisely the Prince of Wales Bridge Rehabilitation. Since September 2018, we have been working on a restoration design plan for the recognized structure connecting both the Ottawa and Gatineau shorelines.

In order to understand the just meaning of our project, we have met with many external parties such as the National Capital Commission, the Moose Consortium and the City of Gatineau, to name a few. During these meetings, and with continued support and collaboration with you, we have determined that the Prince of Wales Bridge has the potential of being a critical centerpiece for the Capital Region. It would not only increase the ease for pedestrian and cyclist traffic to cross the Ottawa River, as integrating pathways onto the bridge is part of the rehabilitation plan, it would also encourage public transportation. With the newly integrated OC Transpo Light Rail system connecting the city East to West, the Prince of Wales Bridge would offer the possibility to expand the rail system to un-serviced areas in all other directions.

With this in mind, we acknowledge that this project would offer positive change to the residents' lifestyle all while stimulating the economy of the surrounding regions. We also recognize the importance of this Capstone project, and we are working tirelessly to provide a high-quality product come early April. Part of our motivation stems from the opportunity of possibly having some of our work incorporated in the future should this project go through, and to the likes of our professional opinion, believe it should.

We hope this serves as an adequate summary of our most current endeavors.

Kind regards,

The GenEng Team
