Subject: Prince of Wales Bridge and Typical Train Station Capstone Projects

Hello Mr Remisz,

Thank you for providing our student Capstone teams with the Prince of Wales Bridge and the Typical Train Station projects. Both of these projects generated much interest among the students as they expressed their preferred choice this term. I also noticed that these student Capstone projects were actually mentioned in the Ottawa Citizen a couple of weeks ago, which certainly highlights the public interest in these MOOSE projects. In addition, given the social, economic and environmental pressures facing Canadian society, refurbishing and renewing heritage infrastructure, rather than demolish and rebuild, is a very important and growing theme for the future. Both of these stimulating projects demonstrate the best principles of civil engineering the University tries to include in its curriculum.

Thanks again for providing these projects.

Alan R. Perks, P.Eng., M.Eng., FCSCE, FEIC
